

Whatever data regarding your personal preferences these companies have, you can imagine it to be in a large bucket, which if leaks, will spill it all out. To prevent against anything of this sort happening, you should turn off personalised advertisements or recommendations for the services that you use. It may lead to some unwanted products popping up, the next time you visit some website, but it will safeguard your data.

To turn off personalised advertisements by Google, first log into your Google Account and click on the data and privacy option on the left options pane. When inside, scroll down and find the section labelled ‘Things you’ve done and places you’ve been’. Here, you will find three options namely, History Settings, Ad settings, Personal Results in Search.

They know everything and they proudly display it!

Mouse over to the Ad settings section and click on “Ad personalization” option. You will be redirected to another page, where you can toggle ad personalisation on and off.

There will be an option labelled as advanced. When you click on it, a dropdown will appear, with the option that would let you control whether Google is able to, ‘Also use your activity & information from Google services to personalize ads on websites and apps that partner with Google to show ads. This stores data from websites and apps that partner with Google in your Google Account.’ We recommended turning it off, because a large chunk of data being fed to Google comes to them, thanks to this option being turned on.

On the same page, if you are curious to know what your preferences are in eyes of Mr Google, using which it serves you advertisements, you
