

can scroll down, and you will find a host of labels and preference lists. It will also show you the advertisements/advertisement categories that you have chosen not to see. Here itself, you can also choose to see fewer advertisements related to gambling on YouTube. This a BETA feature and may not be accessible to everyone just yet. If it is available for you, go ahead. Take control!

Just like Facebook, Google also has a privacy check-up, which you might want to look out and who knows it might suggest something you hadn't thought of yet. It can be accessed here: <https://dgit.in/Googleprivacy>

Twitter

When it comes to Twitter, there is nothing much to look at. Given the nature of the platform, there is not much to be done or looked at. But there are still things that you might want to change or double check in the privacy and safety section.

The bird goes chirp chirp chirp!

Head over to <https://dgit.in/twitter> and you will be greeted with all sorts of options, audience and tagging, discoverability, and what not. But the ones concerning us here, are, Audience and Tagging, Ads preferences, Off-Twitter Activity, Data sharing with business partners, and Location information.
