

So this is how it works!

Can I make my own VPN?

Yes, you can make your own VPN. But we would not recommend you do so, unless you are confident in your abilities to code and maintain such a complicated service all by yourself. There are several things that come attached with making and hosting your own VPN, such as things like lack of complete anonymity, bandwidth limitations (most of us don't have enterprise grade internet that professional VPN providers do), location switching is difficult, etc. If you are okay with all of this or even want to try out making and hosting your own VPN as a pastime or experimental activity, here's an excellent guide from Android Police that will help you in doing so: <https://dgit.in/makeyourownvpn>

The Onion Router (TOR)

Regarded as the messiah of internet freedom activists and the prosumers, who are aware enough to protect their internet privacy but are not fully sure about which VPN provider to choose, The Onion Router, better known as TOR, is a service that we have been recommending you all to use and will reiterate again. The most popular service of the TOR Project
