

is the TOR browser, which we can't get enough of. Use Tor Browser!

For the uninitiated, as defined by its creators on TOR's official website, "Tor is a program you can run on your computer that helps keep you safe on the Internet. It protects you by bouncing your communications around a distributed network of relays run by volunteers all around the world: it prevents somebody watching your Internet connection from learning what sites you visit, and it prevents the sites you visit from learning your physical location. This set of volunteer relays is called the Tor network".

Named after a vegetable

Before we move any further, TOR is not illegal in any place in the world. You can use it wherever you want to. The ISPs only see that your network is using TOR and in almost all cases, are fine with it. So, do not hesitate in using the service.

Isn't Incognito mode enough?

A single word answer to that question would be, No. It is not. As you may have read, whenever you switch to incognito mode on your computer system, incognito mode does not prevent internet activity from being seen by the network monitors.

What incognito mode simply does is create a web browsing session, where cookies and site data are not tracked, and no browser history or information stored in forms is retained. It is like a burner phone, but in the form of an internet browsing session.

If you are simply trying to search and look for things that you do not want to be tracked by organisations like Google and other advertising corporations that are on the hunt for your information, incognito mode is enough. But for anything more sensitive than that, TOR is the way to go.

I should double down, right? Use both TOR and VPN together?

No, you shouldn't do that. The folks who are behind TOR themselves advise not to do so. If you are not someone who knows how to configure both TOR and your VPN service properly, it might end up doing
