

carried out on their accounts. To make sure that you are alerted of every transaction and get to know if it was the one that you did or was it someone else who has access to your account, you should make sure that your number and email id is registered with the bank for alerts. Double-check if you are not sure, and get it done as soon as possible, because it is better to be safe than being sorry, especially when it comes to money and banking information.

Set transaction limits

Another way to minimise the amount of money lost, if you fall prey to some attack, someday is to reduce the transaction amount that can be done with your bank account through various channels. Most major banks these days allow for modification of transaction limits for both card and online transactions, through their mobile applications across platforms, or you can get this done through other mediums like ATMs or toll-free helplines of the banks.

What this would do is not allow anyone with malicious intents to take money from your account over a certain limit. If you want to transact over that limit, you can always change the limit to the amount you want to, and then change to back as it was before.

Avoid banking on public networks

The RBI, which has been making a lot of efforts to make sure people do not fall prey to online frauds, has always maintained that you should avoid using public, free, or open, Wi-Fi networks for online financial transactions. There are big chances that there are devices connected to this network, monitoring these networks and might be tracking all your data that you send and receive while using these free networks.

No prince will give you money

The spam folder of your email account must be full of emails from Prince and Princesses who have somehow shortlisted you out of the billions on earth, to share a chunk of their own money with. Some of these emails, also make their way into your main inbox, if not flagged by your email service. Do not respond or take any step-in response to these emails.

The same applies with any call that you receive where you are requested to share your information like your debit and credit card numbers or any other financial information. No institution across the
