

world will ask for such information from you, ever. So, whenever you get communications that asks you for information, just politely turn them down when on call, and send the email to trash, when online.

Check twice, dial once

Another form of financial and data frauds that has been plaguing the Indian internet is of fake telephone numbers being registered in names of businesses and popular establishments like telecom companies and banks. In such attempts to steal information from the innocent public, what the scammers do is change the contact and customer care numbers to their own on fake aggregation websites, or even places like Google

Never dial numbers if you are unsure

maps. These websites then by using advertisements or SEO techniques are pushed to the top of the search result pages of search engines like Google. And the next thing the people know that they are on a call with a scamster, who they believe is someone who wants to help them, or they intended to talk to.

To avoid falling prey to such activities, what you can do is go to the official website of the institution that you want to contact, or take numbers from a trusted source, whenever you want to do file a complaint regarding a service, or order groceries from your local general store.
