

What to protect?

You need to concentrate your efforts to the most vulnerable points of entry into your world. So be prepared with your own security plan.

Everything is not at risk and some things are so common that you might not even need to allocate your attention and efforts to protect it. What this implies is that you need to account for the data that you want to protect and should protect. Surveillance Self Defense Guide by Electronic Frontier Foundation has formulated a list of questions that you can answer for yourself and make a roadmap for preparing and protecting your data.
