

Divide your time effectively

towards experts. If you are not able to get in person consultation, there are individuals on forums like Reddit who have a reputable history of working with data and information security and are willing to help people out if they have any questions. But, when on those platforms, tread carefully, because there is an equal or greater number of people who are out there, claiming to be experts when they really are not.

For protecting the up and comers on the internet

In this world, where every step one takes is superbly balanced and calculated, and even the schools have shifted to an online mode of study, steadily opening to the normal offline world. The younger generations, who are stepping in and making their way out and about on the internet are at a high risk. There are plenty of people who are out on the hunt for such freshers in the online world, whom they can exploit in the easiest ways possible. There are a few things, both teachers and parents at home can teach the younger ones, to make sure that they are safe, and so is your privacy if they do not have their own separate devices.

1. Keep yourself updated with all the trends and exploits

The internet is a place where things change, and new developments are
