

could be compromised and used in ways that in some cases are even worse than online frauds and scams. Read on and get to know how, at times when you are expecting it the least, your information would be compromised and used in ways that you would not even remotely expect or think of.

Visual Hacking

“There is no place like home.” When you read or listen to this saying, you must be reminded of the comfort that your home gives you after you get back to it, after a long trip or a long day of work. But, when it comes to your data security, this saying holds up well too. This is because of the increasing risks of visual hacking. For the uninitiated, visual hacking refers to the act of stealing personal and confidential data by looking at information displayed on the screen directly.

Whether you are on the train during your daily commute or in a coffee shop, ordering your favorite watch from a website, there are chances that some bystander, whom you might not even suspect of committing such a criminal act, would be there stealing your information. The reason that it becomes as dangerous as, if not more dangerous than other forms of hacking and phishing attempts that are generally made over the internet, is the fact that you cannot do much about it.

Apart from your home, anywhere you go, you stand a risk of falling prey to such an attack. It may not even always be the people with malicious intents who want to take a sneak peek into your screen. There are scenarios

Real life protection is also needed
