

tiny cameras installed above the keypads, where you enter your password, individuals with malicious intents steal your data and use it for their own intents and purposes.

This has become an increasingly common happening in Indian ATMs, and keeps happening despite the various advisories by the Reserve Bank of India regarding the appropriate behavior that can prevent such thefts. To prevent you from falling prey to such attacks, here's a list of steps that you can follow while at an ATM kiosk to make sure you and the information on your ATM card is safe.

Double check everything

- 1. Check twice, swipe and type once:** Before you insert your card into the card reader slot, just give it a little wiggle. If it is loose or makes some unusual movement, avoid that kiosk. There is a very high probability that the machine has been compromised. Same should be done with the keypad. Check for any unusually tight to press buttons, movement, or any anomalies in the area around the keypad. This is a giveaway that someone is there to steal your ATM pin.
- 2. Hide it like that exam answer sheet:** Teachers in school are known to instruct students to hide our answers while giving a test to ensure no one is peeping into their answer scripts. Well, ATM kiosks are another
