

The in-meeting settings menu with visual effects option

often than not. When you are sharing your entire screen, everything that you do is visible to the audiences watching your screen sharing stream. This might not be the best thing to do, because this opens you up to the risk of unwanted password and pattern leaks. So, make sure to double check that you are sharing only the contents of a single application whenever sharing your screen. If possible, make sure that you have already logged into all the required services and applications, before starting the screen share, eliminating any chance of your passwords or patterns getting leaked out.

Data leaks

We have already stressed enough on how securing your home and office wireless networks is necessary. But one thing that can come in handy for professionals and other individuals working with sensitive information is to make sure to use the devices that have been provided to them from their organisations. In most cases, these devices are way more secure and equipped to handle an attack if it comes their way. Large scale organisations usually provide all their employees with computers
