

equipped with proper fail safes and security measures depending upon the use case and sensitivity of the data that the employee is handling. Some such measures include mandatory 2 factor authentication for logging in, checks and balances to ensure that no data can be copied onto another device without proper authentication, etc.

When it comes to attending public online events, there is also a chance that your data might find a way out of your device. To prevent that from happening, what you can do is, use a burner email account for logging in to protect against leaks and other email related attacks. Also, never reveal your name and other related information, unless it is mandated for you to do so. Having read so far into the book, you would have realised that the lesser you give in the world of data, the better. There is no inherent immediate risk while attending online events, but you can never be too sure. **d**
