

how internet accounts work, and how easy it is to get them broken into, would tell you how important it is as a step to prevent your accounts from being hijacked and in some cases, even taken away from you completely.

Here's a brief look into how you can setup Two Factor Authentication using the Google Authenticator App:

1. Download and install the Google Authenticator app on your phone, and set it up as instructed.
2. When prompted to set up your first account, you have two options, Scan a QR code, or Enter a setup key.
3. Select the option you want, and navigate to the privacy settings of the app or website that you want to set up the authentication for and locate the Two Factor Authentication option.
4. From there, according to your selection on the app, about the method you would like to use, click on the option to either view the QR code or the setup key needed.
5. Enter the setup key or scan it in the Google Authenticator app.
6. Enter the presented security key into the website. Your Two Factor Authentication will be ready.
7. Additional accounts/services can be added, by clicking the small + icon displayed in the bottom right corner of the authenticator app's home screen.

What Two Factor Authentication does is, that it adds another layer of security, by making sure that no one with a password to your account, is able to log into it without you knowing. Without the Two
