

desktop environments on Linux. The option to customise your desktop environment is not readily available everywhere. It is safe to say that Linux has surpassed all the other operating systems in this aspect.

Conclusion

Desktop Environments have simplified the way we work on a system. It changes the look and feel of a desktop in a way that makes it more compelling, homely, and easier to work on. With options to customise, you can make your environment more user-friendly.

Once you get the hang of the desktop environment on Linux, you can explore all the available options under desktop environments for your convenience. This also means that you need to have a thorough comparison between them all. That will help you make a wise choice. Hence, in our next chapter, we'll discuss the various comparisons between all the desktop environments. Watch out for more!
