

it decides how you feel or enhances your experience while working on it. While choosing the best desktop environment, the Linux users have numerous options that might overwhelm you at first and drive confusion in the latter part. It's almost like your computer gets a new look and a modern approach. Window manager, also known as WM, is a crucial part of a desktop environment. It is responsible for managing several windows and helps keep track of the ones that are working.

To provide you with a clear idea of the various desktop environments, we have curated a list of the best desktop environments available for Linux, along with their comparison. Without wasting any further time, let's quickly dive into our second chapter.

KDE Plasma

Talking about the best Linux desktop environment, the first on our list is KDE Plasma. It is one of the most popular choices, as it is highly customisable and lightweight. Compared to other desktop options, the KDE Plasma, also known as the “Plasma” desktop, offers a modern and premium feel loved by all.

Using the KDE connect, you can connect your phone with your Linux system to establish quick and smooth communication. Overall, it seems that KDE has emerged as a number one choice for most users as it's incredibly lightweight, flexible and offers built-in tools which enhance user experience.

A leading desktop environment - KDE Plasma!
