

Like the Deepin desktop environment, Pantheon also offers a clean and attractive UI that looks almost like macOS. At the bottom, Pantheon offers a macOS-style dock to place all the most-used applications correctly. If you're looking for a lightweight desktop environment without wanting to compromise on experience and looks, go for Pantheon.

LXQt

The next on the list is LXQT, introduced in 2014. It is designed especially for people who want a lightweight Linux desktop environment without compromising features. LXQt is specially designed for people who prioritise efficiency. Its components are applications that use the KDE and QT frameworks.

Want good looks without compromising on features? Switch to LXQt!

If you're attracted to good-looking software, then it might not be the option for you. But if you want someone smooth, fast, and reliable with less resource consumption, the LXQT is an excellent choice.

Budgie

The last in our list of Linux desktop environments is Budgie. Budgie was introduced to provide a feature-packed experience to its users. This desktop environment was introduced in 2013 and currently uses GNOME technology. Budgie's design screams minimalism, simplicity, and elegance,
