Table 1 - Names, the Programming language it was written in, Graphical toolkit used, and the License.

so if you're into software that looks elegant, you should most probably use Budgie.

With this, we come to an end to the list of the best desktop environments. As discussed above, each of us has a different perspective to monitor things. Some of us prefer a minimalist style filled with neutral colours; however, others gravitate towards vibrant colours. Our list of Linux desktop environments can do the same to your computer.
