

Basics of Desktop Environment

Desktop Environment is everything that you see when you log in to your Linux account as a user. It appears after the sign-in screen that lets you log in to your account. It features all the basic graphics you'll see when you move further into your system. It includes the desktop background, the panels, the menu bars, and everything in between. The taskbar is also included under the desktop environment.

As you may have seen in the earlier chapters, all the commonly used desktop environments like Cinnamon, MATE and Ubuntu have their own set of merits and demerits. All of them have been discussed in our earlier chapters when we compared them with each other.

Now that you have a clear understanding of which option will be the best for you, let's look at the steps to get the desktop environment to work. In simple words, we'll discuss the installation process in-depth and go through it step by step.

A minimal desktop environment - Cinnamon.

How to choose a desktop environment?

From the earlier sections, it is clear that we all need a desktop environment for our desktops. However, finding a desktop environment that is suitable for you and your needs can be different. It depends on personal preferences, colour choices, size of font and bars, and so on.

Although the default Linux desktop environment is good, you can change it. The desktop environment options available are suited for different pur-
