

poses. For instance, KDE Plasma is fast, easy to use, and more efficient than others. Gnome is user-friendly and can be used by anyone and everyone.

How to install a desktop environment?

Knowing everything about desktop environments is not enough if you don't know how to use it practically on your desktop. The first step towards implementing the desktop environment on your desktop is only via the installation of the same.

If you want to install a desktop environment that is different from the default one on your Linux, follow these simple steps:

1. Open the distribution package (.tar, .deb, etc.) of the Linux package manager.
2. Install the most suitable package, if there are more than one.
3. To further illustrate our steps, let's assume you're using Ubuntu 14.04 and Linux Mint 17.
4. If you want to download or install a different desktop environment on Ubuntu, open the Software Centre of Ubuntu.
5. Now search for the desktop environment you wish to install.
6. You'll see an install button; click on the same.
7. The installation process will begin shortly.
8. For instance, if you wish to install the desktop environment named Xfce, you'll have to search for the keyword "xfce4".
9. If you're looking for the full desktop version of Xfce, you need to search with the term "xubuntu-desktop".

OR

If you want to install another desktop environment, say, lxde, you'll search for the term, "lubuntu-desktop". This will give you access to Lubuntu or LXDE. However, if you want to install the full desktop version, you've to search for "kubuntu-desktop".

Some desktop environments are not available on Ubuntu but Linux Mint. For their installation, the steps are:

1. Open the Software Manager Application and search for the desktop environment you want to install.
2. Now, search for the desktop you want.
3. The results will show up.
4. Choose from the list and click on install.
5. You're good to go.
