

A pop-up bar with all the installed applications.

Now, if you want to install it by using the terminal on Linux Mint or Ubuntu, then:

- Copy the command: `sudo apt-get install xfce4`.
- It will get you access to the desktop environment of XFCE.
- If you want the full desktop environment. The command would be: `sudo apt-get install xubuntu-desktop`
- Once you run the command, type in your password.
- Now, confirm with (Y) to grant permission for installation.

If your Linux distribution is different, you can do a quick Google search and find your possible options for installing the desktop environment of your choice.

How to switch between desktop environments?

It is totally possible that you may not be satisfied with one desktop environment. It means you'd like to explore other options for yourself. Linux gives you the option to add another desktop environment that is different from the existing one. To set another desktop environment or switch between them, follow the steps below:

1. Start by logging off from your Linux Desktop.
2. Follow the first step after you've installed a desktop environment.
3. Now, the new login screen will appear.
4. Click on the Session Menu.
5. Choose the desktop environment of your choice from the list.
6. This can be changed whenever you log in to Linux.
