

2. User friendly

The GNOME Linux environment is exceptionally easy-to-use. The reason behind it is the clean and clear user interface and minimal desktop. Also, the GNOME desktop environment is heavily dependent upon several shortcut keys, making it easier for users to switch to different applications in seconds.

3. Dynamic workspace

If you're already into the desktop, it will be no problem to shift to the GNOME Workspaces. To be precise, it's almost the same concept where a user is supposed to set up multiple desktops and open several apps on different desktops. This is how the user can easily manage the different opened apps without opening them again and again.

4. Settings app

Next up in the list is the organised settings app, which allows users to control the different aspects of the desktop while making it look organised. With GNOME, everything is placed in front of your eyes in a well-organized and clean manner.

5. Customise UI and UX

We all are different, and so are our choices, which means some prefer a minimalist design filled with neutrals or bring the retro zing back to their lives through computer screens. All of this is possible on GNOME as you

Simple application viewing - GNOME 41.
