

- Fixed number workspace dynamics
- Multi-monitors workspace behaviours

5. GNOME Calendar 41

Suppose you're already working on the GNOME 41 Calendar. In that case, there are higher chances that you might have realised that it's impossible to make the GNOME calendar using the default calendaring application. However, in the case of GNOME Calendar 41, it is possible to develop the default calendaring app.

These were the major features of GNOME. Apart from these, some minor changes have taken place to experience those changes closely; install GNOME 41 today!

GNOME Calendar 41.

Where can you get it from?

The GNOME is already available for installing through GNU/Linux distributions. To install the Unix's GNOME desktop environment, follow the below-mentioned steps-

- Step 1: Update the Arch Linux
- Step 2: Install X Window System
- Step 3: Install GNOME Desktop Environment
- Step 4: Start and Enable gdm. service
- Step 5: Reboot the System
- Step 6: Install Applications

Conclusion

Today, most popular Linux users prioritise GNOME over others as it is
