

### 3. Resources used

Compared to others, MATE is a lightweight desktop environment that has opened all closed doors for Linux users. Every time one uses MATE and 50 other tabs open on Google, Spotify, and Caja, the system reports the resources being used, allowing them to work without facing any issues.

### 4. Performance

Over the years, MATE has been recorded as fast, reliable, and snappy to use, making it a preferred choice of many. Knowing that it follows a traditional approach, the applications open seamlessly, windows snap quickly, and most importantly, there are no glitches.

### How is the user experience?

User experience plays a significant role in the success or failure of a Linux desktop environment as it decides whether the product meets the users' expectations. In the case of MATE, it always felt like a special and unique mix of traditional desktops with the much-needed twist of modernism.

Searching made easy.

MATE features a menu list in the left side corner, categorising the features and the search function. However, there's a notification, time, sound, and networking tray giving all important information on the right. The "Show Desktop" option is available in the bottom left, primarily for multitaskers. At the bottom right, there's a trash icon to store all the deleted items.
