5. Control centre

One thing which lacks in most desktop environments is an excellent set menu or the control centre. However, Deepin's control centre is unlike all the others as it's simple to use, navigate and is icon-based, which promotes easy functioning of tools without any glitches.

Where Can You Get It From?

With a little technical expertise, you can add, mix, or customise a desktop environment of your own. This way, you'll have an environment that is made exclusively for you. It is one of the many reasons why people prefer using desktop environments on Linux and especially Deepin. Undoubtedly, Deepin is a beautifully designed and curated desktop environment based on Ubuntu which has successfully positioned itself on the top.

To understand the installation process in detail, check out chapter 3, where we have explained the installation of Deepin, along with other desktop environments in detail.
