5. Night light

While working on a screen, it's important to be extra cautious about eyesight and sleep. Today, most desktops have blue-light filters, eliminating harsh rays and preventing eye strain. Budgie features its own new night light applet to promote stress-free working hours.

6. Settings app

Next up in the list is the organized settings app, which allows users to control the different aspects of the desktop while making it look organized. If you love to work on Windows, you must be aware of the fact that it's something hard to find stuff on Windows. Firstly, you might take a few minutes to find it; however, the last reliable option is to make a quick google search. This
