

topic that has a sufficient number and variety of sources. You are initially looking for a starting point. The more you read, the more search terms you will figure out. And these would be pertinent search terms that you will slowly help you gain the information that you seek.

You should look for something that has both journal papers and books, as this shows that many scholars are interested in the subject. However, this will not always be the case.

In certain cases (for example, if the issue is extremely cutting-edge), you may only be able to find journal papers. This is because the topic is so new and fresh that there simply isn't enough information aside from what the scientists have published. This isn't necessarily a bad thing, it's totally fine as long as there are enough viewpoints to choose from. This way, you can form your own educated opinions.

Don't worry, scientists don't bite

You'll be able to swiftly remove some topics using this method. Be harsh in your approach. After 15 minutes, if you haven't found anything, move on. Also, don't get hung up on a subject or search term. You will not always find the right search term and that is totally fine. Another pertinent term is just as likely to lead you down the right path.

*Tip: If you come across two themes with the same amount of sources, ask your lecturer or mentor or guide to assist you in breaking the tie. They can tell you which*
