

Properly comprehend

Now you can begin reading. But don't just scroll through the content passively like you're on Tumblr. With a pen or pencil in hand, read the passage, underlining any unfamiliar vocabulary or intriguing concepts.

Make a list of any other sources or ideas that spring to mind in the margins. You can take notes on a separate piece of paper while reading a library book.

Take adequate rest

Take a quick rest when you've finished reading. Make a cup of tea or coffee for yourself. Take a stroll around the library. Stretch. Simply take your mind off the research for a few moments without turning to low-density entertainment.

Take some time out

Summarise

Return to the article and review the points you highlighted or made a note of. Collect all of your notes and save them in a tool such as Microsoft Onenote or Evernote or even Google Keep. If you need to look something up, do it first, then add the definition to your notes. Make a note of any sources the author cites that appear to be useful.
