

tion, read, recite, and review. Follow the steps below to discover how to extract as much information as possible from any class's text requirements.

Bear in mind that the knowledge you get from reading is critical. You're wasting a lot of time if you simply "do it" without learning anything. With SQ3R, you can train your mind to learn while reading.

1. Survey

Collect the data necessary to narrow your focus and develop goals

- Read the title - This will assist your thoughts in preparing for the subject at hand.
- Take the time to read the introduction and/or summary — Orient yourself to the author's purpose for each chapter, and concentrate on the author's summary of the most significant topics.
- Take note of each boldfaced title and subsection – Before you begin reading, organise your thinking and create a framework for the concepts and information that will follow.
- Take note of any graphics – Charts, maps, and diagrams, among others, are used to illustrate a point. Do not disregard them.
- Italicized text, bold text, chapter names, footnotes and end-of-chapter questions are all included to assist you in sorting, comprehending, and remembering.

2. Question

Assist your mind in engaging and concentrating. Transform each section's bold text heading into as many questions as you believe will be addressed in that section. The higher the quality of the questions, the more likely your comprehension will be. You can always add additional questions as you go. When your mind is actively seeking answers to questions, it is involved in the process of learning.

3. Read

With the questions that you had created in your mind. Start reading each chapter clearly to see whether those questions are getting answered or not. If there's the need to think of more questions on the go, then do so.

4. Recite

Retrain your mind to concentrate on and absorb information when it reads. Following each part, pause and recall your questions, attempting to answer
