

Write down your findings

If your hypothesis was confirmed throughout the experimentation phase, the final step is to compile and report your findings to others.

For example, you discover that the volume of music played has a greater impact on animal behaviour than the sort of music performed.

7. Summarize and publish

The way you use to convey your findings is determined by your scientific position and experience. If you're submitting a scientific fair project, you'll

Let the world read your findings
