

vided to workplace problems, whereas external attributions are given to triumphs, whether it's a persuasive presentation or a promotion.

Furthermore, self-serving bias is more common in individualistic cultures, which place a premium on self-esteem and personal ambitions, and it is less common among depressed people, who are more ready to accept blame for unfavourable outcomes.

Because it comes at the expense of our self-esteem, overcoming this bias can be challenging. Self-compassion, on the other hand, can assist lessen the self-serving bias by treating yourself with care even when you fall short or fail.

Inattentional Blindness

This happens when a person's attention is diverted from noticing a stimulus that is right in front of them.

For example, you might be so concentrated on the road ahead of you when driving a car that you entirely miss a car swerving into your lane of traffic.

Because your attention is diverted, you are unable to react in a timely manner, which may result in a car accident. Inattentional blindness has clear implications, yet it is not difficult to overcome, as is the case with other prejudices.

Many explanations have been proposed to explain why humans encounter this type of cognitive bias. In actuality, it's most likely a combination of these factors.

According to the principle of conspicuity, some sensory and cognitive inputs (such as brilliant colours) are more likely to be pro-
