

Fight Hindsight Bias

Developing knowledge is one of the most effective methods to combat hindsight bias. The less the ensuing hindsight bias, the more knowledge you have about the task in question.

To avoid this, do everything you can to broaden your understanding of the problem at hand, as well as the industry as a whole, so that you can see the assignment in context. Encourage your stakeholders to conduct thorough research on the topic of discussion and to take actions to improve their own knowledge.

Fight Anchoring Bias

If you are under pressure to make a hasty decision, or if you have a general inclination to respond hurriedly, anchoring may occur.

So, to avoid it, consider about your decision-making history and whether you've ever rushed to a conclusion.

Then take your time making selections, and be prepared to ask for more time if you feel pressed to make a rapid decision. (If someone is pressuring you to make a decision, it's possible that what they're pushing for isn't in your best interests.)

Fight Confirmation Bias

Look for ways to question what you believe you're seeing. Seek information from a variety of sources, and evaluate events from many angles using a strategy like the Six Thinking Hats technique.

Alternatively, talk to others about your ideas. Surround yourself with a varied range of people and don't be scared to hear opposing viewpoints. You can also seek out people and material that contradict your beliefs, or designate someone on your team to act as the "devil's advocate" when making crucial decisions. Constructive debate will be beneficial in this situation.

The Six Thinking Hats Technique

Edward de Bono created the Six Thinking Hats role-playing technique in 1986. Each hat represents a distinct lens or perspective on a specific topic, and it's a fun activity that keeps you from thinking too narrowly.

It's a problem-solving and brainstorming strategy for groups that can be used to look at problems from many angles in order to find solutions that might otherwise go unnoticed.
