

ably easy to maintain because it just contains abstracts and references. 13 million of them include abstracts, 14 million have full-text links, and 3.8 million have freely accessible full-text articles.

BioMedCentral

This database contains over 300 peer-reviewed publications in medicine, engineering, science, and technology. BMC Biology, BMC Medicine, Genome Medicine, Genome Biology, Microbiome, Journal of Hematology & Oncology are the top-rated journal titles in medicine and biology. This site pioneered and encouraged open research, and it continues to do so today by providing free access to the majority of publications.

No better place for reading up on medical sciences

Web of Science

It's an online subscription service that gives you access to databases with detailed citation data for a variety of academic fields. One of its main advantages is that it accurately and reliably represents citation indexes — in fact, the service is a direct descendant of Eugene Garfield, the inventor of academic citation indexing. This extensive and complete citation network has approximately 159 million records and 1.7 billion referenced references.
