

the greatest collection of mediaeval and Byzantine text sources available online. All texts are copy-permitted, and a built-in search feature makes it easy to find what you're looking for.

Sci-Hub

Some in the scientific, academic, and publishing sectors have praised Sci-Hub for making knowledge developed by scientists available to the public, frequently with some public funding. Publishers have criticised it for infringing on copyright, reducing revenue, and possibly being linked to activities that compromise university network security (though the cybersecurity threat posed by Sci-Hub may have been exaggerated by publishers). It has also prompted publishers to tighten paywalls. Sci-Hub is a shadow library website that allows unrestricted access to millions of research papers

The site that researchers simply can not do without

and books by circumventing publishers' paywalls in a variety of ways. Alexandra Elbakyan started Sci-Hub in Kazakhstan in 2011 in reaction to the exorbitant cost of research publications behind paywalls. The website is widely used all over the world. The site's founders stated in September 2019 that it served roughly 400,000 inquiries per day, which had increased to 2 million requests per day by 2021. As of February 2021, there are over 85 million articles on Sci-Hub.

Many students who come upon these databases or search engines, regardless of their primary discipline, may feel overwhelmed. After all,
