

6. In Title

Want to find a web page with certain words contained in the title (but not necessarily beside each other)? Type `intitle:` followed immediately by words or phrases.

Example: `intitle:green hats`

7. In Title + Text, URL, etc.

Want to find a webpage where one term appears in the title of that page and another term appears elsewhere on the page, like in the text or the URL? Type in that first term followed by `intitle:` immediately followed by the other term.

Example: `different hats intitle:guide`

8. In URL

If you want to find pages with your search query mentioned in the URL, type `allinurl:` immediately followed by your search query.

Example: `allinurl:green hats`

9. Within a Website

Often, you want to search a specific website for content that matches a certain phrase. Even if the site doesn't support a built-in search feature, you can use Google to search the site for your term. Simply use the `site:nameofthewebsite.com` modifier.

Example: `site:www.digit.in "graphics cards"`

10. Related Search

You don't need a thesaurus. Let Google do all the work
