If you want to find new websites with similar content to a website you already know of, use the related:nameofthewebsite.com modifier.

Example: related:skoar.in

11. Links to a Page

Let's say you want to search for every website that cites a Digit.in article on their website. To do this, use the link: command, immediately followed by the name of a page. Google will give you all pages that link to Digit.in's official website. The more specific the URL is, the fewer, more pointed results you'll get.

Example: link:digit.in

12. Synonyms

Let's say you want to include a word in your search, but also want to include results that contain similar words or synonyms. To do this, use the ~ (tilde) in front of the word.

Example: "green hats" ~party

13. Definitions

If you need to quickly look up the definition of a word or phrase, simply use the define: command. You can listen to the word's pronunciation by pressing the megaphone icon.

Example: define:obtuse

14. Wild Cards

Don't remember the entire term, use a wild card
