

- **The Economist:** Despite its liberal leanings, The Economist has a reputation for reporting reliable, unbiased information.

BBC News is independent and governed by a separate institution named Ofcom, which receives direction from the British Parliament. It is primarily funded by a licence fee paid by British households.

You can combat misinformation

By examining allegations and refusing to promote bogus news, everybody can and should resist the spread of disinformation. It's best not to tell a narrative that you're not sure about. You may take efforts to determine whether the material you receive online is factually truthful, regardless of your age, gender, location, or political convictions. Some people, on the other hand, are in a unique position to combat the spread of disinformation.

Writers and Journalists

Journalists and writers have complete control over the content they produce, and they have a responsibility to provide information that is as accurate and true as possible. Despite this, a study conducted by the Poynter Institute found that 80% of journalists have succumbed to online misinformation. This is why Google has developed two new fact-checking tools for journalists. Journalists and writers can prevent misinformation from spreading by only reporting material they know to be true.

Youth Power

Children are the future of our planet, and as the public becomes more aware of fake news, they will be able to counter disinformation at an early age. Generation Z, born between 1996 and 2010, is the first generation to have grown up with nearly unlimited access to technology and immediate communication. Generation Z is well-prepared for public service since they are aware of the concerns and are not scared to participate in activism. Older adults, according to the Poynter Institute, are more inclined to spread bogus news. Generation Z, as digital natives, may have a better understanding of how to evaluate sources and spot fake news than previous generations who have not grown up with the internet.

Fact-Checking Websites

There are many resources and tools designed to help you verify the truth of factual claims on and off the internet.
