

modifications and their dates in addition to the document's version number. If necessary, give the file names in addition to (or instead of) the version number.

- Determine who will complete finals and label them as 'final.'

Additionally, there are various external resources that can provide assistance on the appropriate file naming standards. Your library or university will let you know of the standard that is accepted.

## Documentation and Metadata

To guarantee that you understand your own data and that others can locate, utilise, and properly cite it, it's beneficial to include documentation and metadata (data about data) with the documents and datasets you create.

Metadata example

The phrase 'documentation' refers to all of the information required to read, comprehend, and use a particular dataset or collection of documents. On this page, we use the terms 'documentation' and 'metadata' interchangeably (data about data - typically incorporated in the data files/documents themselves).

## How to include Metadata

It is a good habit to begin documenting your data at the start of your research project and to continue adding material throughout the duration of the study. Include documentation practises in your data planning. There are several methods for documenting your data:
