

The ISA tools, which are based on the general-purpose Tabular format for ‘Investigation’ (the project context), ‘Study’ (a unit of research), and ‘Assay’ (analytical measurement), assist you in providing detailed descriptions of the experimental metadata (i.e. sample characteristics, technology and measurement types, sample-to-data relationships) to ensure that the resulting data and discoveries are reproducible and reusable.

FAIRsharing

FAIRsharing is a curated, searchable repository of interconnected data standards, databases, and regulations in the biological, environmental, and biomedical sciences.

Managing References

Months or even years can pass between projects, and it’s easy to lose track of which piece of information originated from which source. It can be a problem to reconstruct half of your citations in the final scramble! Because your future self may forget details that appear obvious in the present, it is critical to keep detailed records of your sources. Reference management software assists you in keeping track of your citations during the course of your work and somewhat automates the process of creating bibliographies when the time comes to publish. Your departmental librarian can assist you in selecting the appropriate format for references and is likely to be familiar with some beneficial search and management technologies that you have not used previously. You are welcome to seek guidance from him/her.

Organising email

The majority of people now send and receive several messages daily, and as a result, their inboxes can soon become clogged with hundreds of personal and work-related emails. Setting aside time to organise your emails will guarantee that information is easily accessible and securely saved.

Apart from the apparent aggravation and time lost searching for an email you sent to someone last month, email is increasingly being used to store crucial documents and data, frequently with information about the attachments contained within the email itself. Without adequate controls in place, they are frequently erased accidentally. Additionally, it is critical to note that your business email is subject to the Data Protection Act 1998 and the Freedom of Information Act 2000, which means that your emails may be subject to investigation.
