

- On lines, use keywords. Short phrases can also be effective.
- Use a variety of coloured, sized, styled, and dimensioned multi-headed arrows.
- Make use of codes to help you focus on specific areas of the map.
- To keep your ideas separate, use sufficient spacing between them.
- Throughout the map, use vibrant graphics and colours.
- Use pictures to express words in a metaphorical, acoustic, or a direct way.
- To bring emphasis to specific branches, create limits and borders.
- Create hierarchies of sorted numbers, lists, and letters in a linear fashion.
- Create a line hierarchy in which the lines begin thick and gradually thin out as they expand outward.
- Draw thick, radiating branches radiating outwards from the primary image.
- To underline their level of importance, create word hierarchies by altering word sizes.
- To underline the importance of each word, use upper and lower case.
- Create a memorable centre image and supporting images that branch out from the main branches.
- Draw several shapes to represent different thoughts and map pieces.
- To distinguish concepts and themes, use a variety of font styles.
- To differentiate between various topics, use different branch colours.
- To emphasise words and phrases, change the branch endings.
- To emphasise distinct ideas, vary the thickness of the branches.
- To boost recall, change the colours, intensity, and size of the images.

Drawing mind maps in this manner helps to engage our imaginations, strengthen visual associations, and improve retention and recall of the information we're learning.

Popular Mind Mapping Software

There are a plethora of mind mapping software tools on the market these days. There is a mind mapping application for every platform, whether you're using a PC, a MAC, Android, iOS, or Linux.

Mindly

Mind mapping on a mobile device presents a number of unique obstacles, owing to the small screen size, the annoyance of scrolling and zooming, and the associated reading issues. However, Mindly's innovative thinking makes mind mapping on a smartphone possible—and, frankly, rather enjoyable.
