

While many mind mapping programmes demand at least an email address to create and share public mind maps, MindMup does not. Although free mind maps expire after six months, if you're utilising them for a fast brainstorming session, this is sufficient. To register or save private maps, you must pay \$2.99 per month for MindMup Personal Gold.

Coggle

When you first open a diagram in Coggle, you'll notice the core node of a new mind map, as well as an inviting plus sign for adding more nodes and ideas. Each time you click the plus sign to add a new child node, Coggle will pick the direction, placement, and colour of the new node automatically. However, you may easily move the nodes about to reorganise them into a structure that better fits your layout. Alternatively, you can right-click on them and select Choose Style to alter the colour, or the line style and thickness of the connections if you're on the Awesome plan.

If you prefer to use keyboard shortcuts throughout the mind mapping process, a cheat sheet of keyboard shortcuts is available in the canvas's bottom-right corner. To hide it, click the green X icon; to restore it, click the green question mark icon.

One of our favourite features is that Coggle allows you to format your mind map elements and messages using Markdown, which allows you to be as creative as you like when adding text, photos, and links to the canvas.
