

tery life. The main feature locked behind the paywall is the design choices, but even the free options that are unlocked by default aren't all too shabby.

Cartogram

Cartogram is an app that lets you create visually appealing yet minimal live wallpaper using your device's location.

The wallpapers are very easy to set up, only requiring the user to choose a location, and then pick a design style of their choice after which the user will simply have to set it as their wallpaper. The user can either pick a location of their choice or set the app to track their live location and update it on their wallpaper.

You can also customise the way maps are displayed with different styles ranging from minimal aesthetics to satellite images. Cartogram wallpapers look clean, appealing and visually stunning to look at on just about any home screen setup.

Bonus Section - Wallpaper Engine

Did you know that Wallpaper Engine is there on Android, that too for free? You can synchronise it with your Windows desktop app, and customise it to your heart's content as you do on the PC version. Best of
