

Now, pick the option which says 4 x 1 in its title.

Tap and hold on to the 4 x 1 tile and place the widget anywhere on your home screen. Just make sure you have enough space to accommodate the entire widget or a new screen will be created. After you're done placing the “blank” widget, your home screen should look something like this.

Now comes the fun part. Tap on the widget to go to the “actual” home screen of the KWGT widget app.

This is your command centre to the widget. You can customise, change or delete your widget from here. If you have multiple KWGT widgets placed on your screen, you can even cycle through them and customise them too. This control panel will give you the power to add, delete and modify currently installed packages. What are packages you ask? Well, we mentioned earlier that this whole KWGT project is crowdsourced, right? Packages are nothing but widgets made by other developers for KWGT widget apps designed to be used with the KWGT app.

By default, the “basic” pack will be installed and that contains a widget for every occasion – News, weather, clock, music player, etc.

To familiarise yourself with the KWGT environment, let's start by putting one of the basic widgets on your home screen first. Say you want a time-and-date widget on your home screen and it has to look fancy too. Say no more. Scroll down till you see the “Cut” widget and tap on it.

After you tap, you'll be taken to the widget editor. We will not be going in-depth about this customisation menu since there is
