

Microsoft Launcher

As the name suggests, this Launcher has been developed by the Microsoft team and no it won't make your home screen look like Windows 10 / 11. To be honest, when we first installed the app, we too thought the same thing but Microsoft proceeded to blow all of our expectations through the roof. This Launcher is minimal, has a ton of customisability and some nifty features that you may like.

Install the app from the Play Store but do not press “Open”. We have to do something first. Head on to Settings and search for “Default Apps”.

Tap on it and you should see a setting named “Home App”. Go to the menu and select “Microsoft Launcher”.

When you select “Microsoft Launcher”, the Launcher is going to open. Now, go through its self-explanatory setup. It'll ask for basic stuff like your wallpaper preference, whether you want to sign in into your Microsoft Account, selection of your favourite apps, etc. Complete that and you'll be taken to the home screen. Above is what the home screen of the Microsoft Launcher looks like.
