

and brings you a minimal interface with beautiful animations and probably more information about the weather as compared to any other weather app.

But, this chapter is not about weather apps, it is about customising your notification shade. Well, what would a weather app have to do with the lousy notification shade? Well, as it turns out, Overdrop lets you have a small notification sitting on your notification that shows the

current weather in your city. To set the notification up, install the app from Play Store, open it and enter your city there.

The notification is set to be “On” by default. So, choose a theme of your preference (light/dark) - we’re choosing dark over here and just simply tap on “Done”. You’ll see this beautiful UI in front of you after that.

But, the icing on the cake is the notification. Go home and swipe down to see your notification shade. You’ll have a minimal notification waiting for you informing you about the weather.

Sadly, this is not a persistent notification and it cannot be customised too. You see, this beautiful app comes with its own caveats. Although it is very good at what it does, if you want to unlock the full potential of the app, you will need to pay for it. But once you do, you’ll get the option to make the notification persistent and you’ll be able to customise it to your heart’s extent too.

Notification Toggle

More often than not, we find ourselves in a situation where we just want to access a setting but it’s either lost in the sea of quick settings or we’ll have to manually go to the Settings app and find the setting that we’re looking for. Well, Notification Toggle is here to change all of that.

Notification Toggle promises to add extra functionality to your noti-
