

fication shade by putting shortcuts to almost all commonly used settings right inside your notification shade. While doing that, it offers full customisability and even the option to pin apps on your notification shade. Let us show you how to set it all up. After you install it from the Google Play Store, you'll see the welcome screen. Swipe left on that screen and it should bring you to this screen.

These are all the shortcuts that you can add to the notification. We collapsed all the menus to give you an overview of all the different categories of settings that this app covers:

From here, just start ticking all the settings you want to use and as soon as you go home and pull down your notification shade, you'll find them waiting for you.

And the cherry on the cake here is that the notification is persistent - by default. This means that, unlike the above two apps, you won't need to pay to make the notification persistent. Props to the dev for adding this feature.

Another nifty feature of this app is that you can even add the apps installed on your device as shortcuts there. Hence, it'll act like a dock - but on your notification shade. To do that, just
