

swipe left once more from the previous screen (the one where you picked the settings) and click on the “Add App” button. It’s pretty straightforward from there. Keep on adding apps and changing their position till you’re satisfied. Here’s how it’ll look with four apps:

Aside from everything mentioned above, there is a truckload of customisation options in the app too. You can change the icon size, icon colour and even the icon itself. Yes! You can add custom icons too. You can even change the look and feel of the notification itself i.e. the background, foreground, font colour, etc. All this stuff is completely free to do in the app. We highly recommend you to check it out.

Quick Settings

Ah well, this is an interesting one. If you’ve used an Android phone for long enough, you know that the quick settings are an integral part of the notification shade and they have been there for quite some time. You probably also know that most people who use an Android phone never care to customise their quick settings menu. They usually just stick to the default 4/5 items given and forget about everything else existing in there. Well, we’ve come up with a theory for why people do that. You see, we’ve come to realise that the quick settings pane isn’t easily customisable. You cannot add the shortcuts that you actually want. There are just X amount of predefined shortcuts given to you by the phone manufacturer, you can choose to either use them or forget about them altogether. This changes now. Meet “Quick Settings”. A handy app that is meant to change the way you use your quick settings.

This application deserves the final spot because we saved the best for the last. We chose this application because of its sheer ability to customise and make your notification shade more useful per se. Now, usually, as we mentioned earlier, there
