

and it has 100% functionality. But, for the people who want to customise the heck out of their notification shade, you can customise it to your heart's extent. After a bit of tinkering with the sliders and the toggles inside the app, this is what we came up with.

Again, all of these customisations were done in the free version of the app itself and we personally think that it should be enough for most people if they're willing to ignore the ads.

Just a last piece of advice for this app, if you want the notification shade to be permanent, just check these two toggles in the "Extras" menu.

Bottom Quick Settings

Smartphone displays are getting bigger. It wasn't long ago that a 5-inch display was considered as a "big" display and now, nobody even talks below the measurements of 6.2 - 6.3 inches or below. You see, smartphone manufacturers figured out a way to make the displays bigger while considering the fact that it's a phone and it's meant to be held with one hand. Hence, they ended up making the displays taller as compared to wider. This solved one problem - making the display
