

A fresh coat of paint

Smartphones. They're omnipresent in our modern age, and almost everyone you walk by most certainly owns one. The Android smartphone market is close to 73 per cent of all active smartphones in the world today. And thus, the Android ecosystem holds an indomitable grasp over the tech world. But in all the spec upgrades, the new software releases and the crazy hardware, many have forgotten the core principle on which android was built — it's a free open-source operating system with support for third-party applications.

With the ecosystems that companies such as Samsung and OnePlus have created for their specific phones, the world of tweaking and modding has been left behind in the sands of time, a relic of the past where the techies had to fend for themselves by finding weird and wacky solutions to insignificant problems. Problems that were solved purely for the fun and joy of messing around with your smartphone, pushing the realm of what's possible.

You see, many people have forgotten the core essence of customising their gadgets. Simply ask yourselves, what is customisation in its most raw form? It's the process to make a thing you own truly YOURS. Let's say you buy a shiny new OnePlus 9 and your friend bought the same phone at the same time. If you put those two phones side-by-side and if they're of the same colour, you won't be able to make out the difference between them. It's only when you unlock each phone and use it, you will be able to identify which phone is whose. The small differences in the way each user arranges the app icons to the different wallpapers that they prefer or something as
