

select a wallpaper first and then apply the icon pack. After you change your wallpaper, you'll expect the icons to adapt to the colour of the wallpaper but that doesn't happen automatically. After you change your wallpaper, you need to re-apply the icon pack. This simply means disabling it and then re-enabling it from the "Icon Packs" section of your Launcher settings. As of right now, only the Google apps and some other apps are supported as "Adaptive" icons but the developer plans to bring this feature to a lot more icons in the future.

## Verticons

All the icon packs that we have looked at till now followed a very strict shape design. They were either round or rectangle in design and that's true for almost all of the icon packs out there. All of them have round icons and some of them have rectangles too. But what if we said that there is one icon pack that breaks the meta. It breaks the rule of icons being always "round" or "horizontal rectangles". By now, you must've understood what that app's name means. Verticons or Vertical-Icons.

Verticons isn't like any other icon pack that we've seen before and we fell in love with it the moment we saw it. We just knew to include it in this list and that's the reason that we were saving the best for the last. These vertical icons are sure to grab anyone's eyeballs to your phone just because they look so different. The icon pack complements the current tall aspect ratio screens and carries a material design with a vibrant colour palette.
