

Volume Styles

This is the ultimate app to have fine-grain control over every tiny bit of the volume controller. One could spend anywhere between five minutes to upwards of two hours messing around with the plethora of options designed by the devs. So buckle up!

Opening the app greets us with the styles home page. There is a list of preset styles to pick from, specifically mirroring various operating systems, such as Stock Android, One UI, Oxygen OS, MIUI, and even the likes of iOS and Windows 10. These are pretty solid to pick from, although some require certain tweaks to get the full feel of that OS. We tested the Oxygen OS style and changed the colour theme to black and red rather than the white and blue default, and boy does it look amazing. If you're not a fan of the hard red, even a bright orange does the trick.

You might be wondering where you can tweak these settings, and the answer to that is in the second tab 'Style Settings' and Third Tab 'Customise'. Here you can change colours, tweak sizes of the tabs or the sliders, alter the position of the panel, choose which slider types are displayed, and so so much more. The crazy thing is the options for sliders such as separation between normal voice call and Bluetooth voice call, casting volume, and even brightness.

There are two options at the top of this page, however, Community Styles and Create Styles which is where the real magic begins. Let's start with the simpler one, Community Styles. Here you
